

This is the future of high speed transportation its three and half times faster than japans bullte trains and even faster than a boieng 747 . it's a hyperloop .magnetic tubes levitating inside a tube at more than 1000kmper hr this technology can Make working and living in two different cities a norm.

Also creating a world with less congestion and pollution .

with its successful first ride with human in November 2020 we could be less than 10 years away from it becoming reality. The concept of hyper loop became very popular in the year of 2013 thank to elon musk.
